Pollution Prevention By Design

IT-15D™

NSN 4940-01-482-0479

The **IT-15D™** is a one of a kind, fully deployable partswasher / weapons cleaner built to meet the rigors of field maintenance operations. This system solves the challenges of how to clean maintenance parts and weapons around the world wherever U.S. Forces are deployed in an environmentally responsible way. The **IT-15D™** utilizes DoD's selected family of Environmentally Compliant Solvents (ECS), **BREAKTHROUGH®**, **SKYSOL®**, and **SKYSOL® 100**. The **IT-15D™** features on-line filtration to .1 micron nominal using the Inland Technology **EDGE TEK™** Filter, NSN 4330-01-381-8024, stocked by DSC-Richmond, permitting near-full reclamation of the ECS. The **IT-15D™** is completely self-contained and operable using military maintenance generators in the field or using fixed base 120v 60hz power.

The **IT-15D™** is built with the DoD user in mind; its small compact size allows it to be stored or used in a tool truck, combat vehicle, or on a shelf in garrison waiting for deployment.

Dimensions - Deployment Ready

Overall Outside 23"L x 17"W x 6³/₄"H

Inside Tub 21"L x 15"W x 6¹/₄"D

DOT Air Deployable UN1A1 Solvent Barrel With Handle
