### **IT-30™**

### **PARTSWASHER CLEANER / RECLAMATION SYSTEM**

The Inland Technology **IT-30™** Partswasher Cleaning System is designed for high volume usage. This system provides a motor pool partswasher that has a handier size requiring less solvent for operations and making acquisition more cost effective. This machine has a Lifetime Warranty as long as Inland Technology filters and solvents are used in the machine.

The **IT-30™** is equipped with the Inland Technology **EDGE TEK™ Micro Filtration System**, a unique element which filters down to .1 of a micron nominal. When properly managed, this system, used with DoD's selected family of Environmentally Compliant Solvents (ECS), **BREAKTHROUGH®**, and **SKYSOL® 100** NSN 6850-01-381-4423, usually extends solvent life for several years. Documented waste reduction in DoD averages 99% per installation for this waste stream.

The **IT-30™** has been designed as a remote reservoir partswasher. It meets or exceeds most air quality requirements for remote reservoir solvent cleaning.

### **Specifications**

Overall dimensions:	37"L x 27"W x 63"H	Still/Working Height:	39.5"
Inside tub dimensions:	32"L x 20"W x 8"H	Electrical Requirements:	120V, 60Hz, 1.7A
Pump system:	500 GPH pump	Tub thickness:	14 gauge steel
Drain basket:	3-1/4" diameter	Solvent capacity minimum:	25 gallons
