May 1995
EPA Pollution Prevention Possibilities for Small
and Medium-Sized Industries

“The primary economic benefit of using the **BREAKTHROUGH® / EDGE TEK™* Micro Filtration System** is the reduction in waste disposal costs. There is a net reduction of 0.75 ton per year per station in wastes disposed of or sent off site for recycling. This is a savings of \$60.00 per month to dispose of this material. A payback period of fewer than 4 years was found. At 4 years, the return on investment (ROI) was 9.67% and after 10 years the ROI was greater than 29%.”

RESIN FILTERS 25 MICRON Filtration System Specifications:

- Pre-filter housing resistant to organic solvents
- Pre-filter pore size 120 mesh
- Pre-filter element mesh material of 304 stainless steel
- Pre-filter flow in Radial direction toward axis
- Pre-filter end caps of 24 gauge steel with centered 1” holes
